

Colostrx[®] CR Colostrum Replacer

Calving can be stressful, but colostrum doesn't have to be. Colostrx delivers whole colostrum when calves need it most.

IMMUNITY

Your calves need antibodies from colostrum to stay strong and healthy within the first few critical weeks of life, but sometimes maternal colostrum isn't available, reliable or convenient.

Here are a few scenarios where calves might need colostrum replacement from Colostrx CR:

- Dystocia calves (hard pull or c-section)
- Night-born calves who are slow to stand and suckle
- Orphaned calves
- Twins
- Genetically high-value calves

COLOSTRX[®]
**CR COLOSTRUM
REPLACER**
MADE WITH WHOLE BOVINE COLOSTRUM™

ENERGY

You can't predict the weather, but you **can** feed Colostrx CR to make sure your calves have the energy they need to withstand any storm.

Since Colostrx is made with whole bovine colostrum, it is naturally **high in colostrum fat**, a sustainable energy source for newborn calves to get up and suckle. Colostral fat also helps calves thermoregulate and shiver to stay warm in severe weather.

We never strip out the natural colostrum fat or replace it with animal fat, coconut oil, vegetable oil or other fat sources found in pastes or products that offer minimal benefit to the calf.

THE COLOSTRUM BRAND RANCHERS TRUST

We ensure **safety, efficacy, purity** and **potency** as USDA Veterinary Biologics permitted product. We also rigorously test our colostrum powder to ensure the products are clean and effectively heat-treated to eradicate any contaminants from the sourced maternal colostrum.

EASY TO USE

Colostrum CR can be easily mixed in 15 seconds!

Check the back of the package for proper mixing instructions and remember to mix with water that is 110 to 120°F.

DIRECTIONS FOR USE

Mix 1 bag of COLOSTRX® CR COLOSTRUM REPLACER into one quart of clean, warm water (110 to 120°F) and feed within 2 hours of birth.

Calves should receive a second feeding of colostrum within 8 hours. Feed to calf by bottle or esophageal feeder.

For best results, feed a replacement dose of 2 bags. Mix 2 bags of powder with two quarts of warm water.
