

Colostrum is proven to support a healthy intestinal tract

Studies prove calves treated with colostrum have a statistical decrease in morbidity, mortality, severity of and duration of loose manure, reduced antibiotic use and improved average daily gain.

HEALTHIER CALVES

HIGHER AVERAGE DAILY GAIN

LOWER RISK OF MORTALITY

LESS LOOSE MANURE

REDUCED ANTIBIOTIC USE

Grams of Colostrum Powder	Amount of Water	Duration
140g	1 qt/L	5 days

Directions

1. Add 140g of colostrum powder to 1 qt/L of water
2. Mix with water (110-120F) for easy mixing.
3. If calves do not have an appetite, solution can be tube fed.
4. We recommend feeding at least 2 hours before or after milk feeding.
5. Feed for at least 5 days or until stool is firm.
